Experience

Network Operations Engineer Dec 2025 – Present
Organon *Florham Park, NJ*

- Developed a reusable cloud automation framework for AWS (95+ accounts) and Azure (49+ subscriptions), streamlining infrastructure operations across a large multi-account environment.
- Built Python automation using Netmiko to apply configuration changes across 700+ network switches, enabling network-wide configuration updates and monitoring of critical switch metrics.
- Automated IP and FQDN blocking with Ansible and Azure Blob Storage, converting a 10-minute manual ticket workflow into a single-click operation for the team. The task accounted for approximately 20% of daily tickets.
- Built Azure private endpoint DNS migration automation to replace existing DNS zone configurations, standardize zone assignments, and update Infoblox private resolver configurations. Consolidated DNS resolvers to one per region, reducing recurring infrastructure costs.
- Used the cloud automation framework to identify and clean up expired AWS ACM certificates and remove specified inbound security group rules across accounts, reducing unnecessary resources and outdated access rules.
- Developed a web scraper for AT&T's DNS portal to extract DNS records into JSON for import into R53 during a DNS migration.
- Supported both Network Operations and Monitoring teams, learning unfamiliar infrastructure platforms quickly while independently owning automation projects and validating high-impact production changes.

Full-Stack Developer May 2025 – Dec. 2025
Litigation.gg *Remote*

- Built a parser to ingest the Code of Federal Regulations into PostgreSQL and developed a NestJS API with scheduled jobs to keep regulatory data current.
- Integrated Federal Register and FOIA data sources through wrapper APIs, simplifying access to external government data for application services.
- Developed an MCP server and custom client to expose programmatic resources to AI workflows, enabling resource selection, retrieval, and context-aware responses using NestJS and OpenAPI-based interfaces.

Backend Developer Jan. 2025 – Dec. 2025
SPOEM *Remote*

- Integrated Microsoft Dynamics 365 with AWS Lambda, API Gateway, and Secrets Manager to securely retrieve business data through authenticated API workflows.
- Automated Azure client-secret rotation using AWS Lambda and Secrets Manager, generating and storing replacement secrets before expiration.
- Secured S3 file downloads with authorization controls and signed URLs; implemented AWS-backed IP analytics, transactional email delivery with SES, and application deployment through AWS Amplify.

Full-Stack Software Engineer Intern May 2023 – Aug. 2023
Clutch Holdings *Remote*

- Developed full-stack features using PostgreSQL, Java, Scala, React, and JavaScript; optimized REST API calls and pagination to improve table loading times by 80%.
- Implemented validation and confirmation flows to reduce invalid data entries and manual cleanup, and wrote unit and integration tests for legacy systems.

Technical Skills

Automation: Python, Ansible, Netmiko, APIs, Web Scraping, Postman
Cloud: AWS, Azure, Lambda, API Gateway, S3, Route 53, ACM, Secrets Manager, Azure Blob Storage, EC2, Load Balancers, App Gateways
Networking & Monitoring: Zscaler, Palo Alto, Alkira, VeloCloud SD-WAN, Infoblox, Cisco, Juniper Mist, SevOne
Software Development: SQL, PostgreSQL, JavaScript, TypeScript, Java, React, Next.js, NestJS, Git

Education & Certification

Rutgers University New Brunswick, NJ
B.S. in Computer Science *May 2024*

AWS Certified Developer – Associate Oct. 2024 – Oct. 2027
